### Section 3. Composition/information on ingredients

Highly refined base oil (IP 346 DMSO extract < 3%). Proprietary performance additives.

Mixture

### Substance/mixtur

|--|

| Ingredient name   | CAS number    | %           |
|---|---------------|-------------|
| Base oil - highly refined   | Varies        | ≥10 - <25   |
| Base oil - highly refined   | Varies        | ≥25 - <50   |
| Distillates (petroleum), hydrotreated, heavy paraffinic                 | 64742-54-7    | ≥25 - <50   |
| Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based    | 178603-65-1 / | ≥5 - <10    |
|   | 72623-86-0    |             |
| Zinc O, O, O', O'-tetrakis (1,3-dimethylbutyl) bis(phosphorordithioate) | 2215-35-2     | ≥1 - <3     |
| Phenol, dodecyl-, branched  | 74499-35-7 /  | ≥0.1 - <0.3 |
|   | 121158-58-5   |             |

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

### Section 4. First aid measures

#### Description of necessary first aid measures In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Eye contact Eyelids should be held away from the eyeball to ensure thorough rinsing. Check for and remove any contact lenses. Get medical attention. Skin contact Wash skin thoroughly with soap and water or use recognized skin cleanser. Remove contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention if symptoms occur. Inhalation In case of inhalation of decomposition products in a fire, symptoms may be delayed. If inhaled, remove to fresh air. The exposed person may need to be kept under medical surveillance for 48 hours. Get medical attention if symptoms occur. Ingestion Do not induce vomiting unless directed to do so by medical personnel. Get medical attention if symptoms occur. **Protection of first-aiders** No action shall be taken involving any personal risk or without suitable training.

#### Most important symptoms/effects, acute and delayed

See Section 11 for more detailed information on health effects and symptoms.

#### Indication of immediate medical attention and special treatment needed, if necessary In case of inhalation of decomposition products in a fire, symptoms may be delayed. Notes to physician The exposed person may need to be kept under medical surveillance for 48 hours. Treatment should in general be symptomatic and directed to relieving any effects. **Specific treatments** No specific treatment.

### Section 5. Fire-fighting measures

| Extinguishing media                        |   |
|--|---|
| Suitable extinguishing media               | In case of fire, use foam, dry chemical or carbon dioxide extinguisher or spray.    |
| Unsuitable extinguishing media             | Do not use water jet.   |
| Specific hazards arising from the chemical | In a fire or if heated, a pressure increase will occur and the container may burst. |

| Product name Castrol GTX 5W-30         | Product code | 452871-US12 US13 US81 Page: 2/10 |
|--|--------------|----------------------------------|
| Version 1.06 Date of issue 12/22/2014. | Format US    | Language ENGLISH                 |
|  | (US)         | (ENGLISH)                        |

### Section 5. Fire-fighting measures

| Hazardous combustion products                  | Combustion products may include the following:<br>carbon dioxide<br>carbon monoxide<br>nitrogen oxides<br>sulfur oxides<br>phosphorus oxides<br>metal oxide/oxides                          |
|--|---|
| Special protective actions for fire-fighters   | Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. |
| Special protective equipment for fire-fighters | Fire-fighters should wear positive pressure self-contained breathing apparatus (SCBA) and full turnout gear.  |

### Section 6. Accidental release measures

#### Personal precautions, protective equipment and emergency procedures For non-emergency No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from personnel entering. Do not touch or walk through spilled material. Put on appropriate personal protective equipment. Floors may be slippery; use care to avoid falling. If specialised clothing is required to deal with the spillage, take note of any information in For emergency responders Section 8 on suitable and unsuitable materials. See also the information in "For nonemergency personnel". Environmental precautions Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air). Methods and materials for containment and cleaning up Small spill Stop leak if without risk. Move containers from spill area. Absorb with an inert material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor. Large spill Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water courses, basements or confined areas. Contain and collect spillage with noncombustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations. Dispose of via a licensed waste disposal contractor.

### Section 7. Handling and storage

| Precautions for safe handling                                      |  |  |  |  |  |
|--|--|--|--|--|--|
| Protective measures  | Put on appropriate personal protective equipment (see Section 8).  |  |  |  |  |
| Advice on general occupational hygiene                             | Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Wash thoroughly after handling. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.  |  |  |  |  |
| Conditions for safe storage,<br>including any<br>incompatibilities | Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Keep container tightly closed and sealed until ready for use. Store and use only in equipment/containers designed for use with this product. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.Sulfur compounds in this material may decompose when heated to release hydrogen sulfide gas which may accumulate to potentially lethal concentrations in enclosed air spaces. Vapor concentrations of hydrogen sulfide above 50 ppm, or prolonged exposure at lower concentrations, may saturate human odor perceptions so that the smell of gas may not be apparent. Exposure to concentrations of hydrogen sulfide vapor above 500 ppm may cause rapid death. Do not rely on the sense of smell to detect hydrogen sulfide. |  |  |  |  |

While specific OELs for certain components may be shown in this section, other components may be present in any mist, vapor or dust produced. Therefore, the specific OELs may not be applicable to the product as a whole and are provided for guidance only.

| Appropriate engineering<br>controls | All activities involving chemicals should be assessed for their risks to health, to ensure<br>exposures are adequately controlled. Personal protective equipment should only be<br>considered after other forms of control measures (e.g. engineering controls) have been<br>suitably evaluated. Personal protective equipment should conform to appropriate<br>standards, be suitable for use, be kept in good condition and properly maintained.<br>Your supplier of personal protective equipment should be consulted for advice on<br>selection and appropriate standards. For further information contact your national<br>organisation for standards.<br>Provide exhaust ventilation or other engineering controls to keep the relevant airborne<br>concentrations below their respective occupational exposure limits.<br>The final choice of protective equipment will depend upon a risk assessment. It is<br>important to ensure that all items of personal protective equipment are compatible. |  |  |  |  |
|-------------------------------------|--|--|--|--|--|
| Environmental exposure controls     | Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.   |  |  |  |  |
| Individual protection measures      |  |  |  |  |  |
| Hygiene measures                    | Wash hands, forearms and face thoroughly after handling chemical products, before<br>eating, smoking and using the lavatory and at the end of the working period.<br>Appropriate techniques should be used to remove potentially contaminated clothing.<br>Wash contaminated clothing before reusing. Ensure that eyewash stations and safety<br>showers are close to the workstation location.  |  |  |  |  |
|                                     |  |  |  |  |  |

|     |             |                           |        | (US)         |                       | (ENGLISH)  |

## Section 8. Exposure controls/personal protection

| •                      | · · · ·  |
|------------------------|--|
| Eye/face protection    | Safety glasses with side shields.  |
| Skin protection        |  |
| Hand protection        | Wear protective gloves if prolonged or repeated contact is likely. Wear chemical resistant gloves. Recommended: Nitrile gloves. The correct choice of protective gloves depends upon the chemicals being handled, the conditions of work and use, and the condition of the gloves (even the best chemically resistant glove will break down after repeated chemical exposures). Most gloves provide only a short time of protection before they must be discarded and replaced. Because specific work environments and material handling practices vary, safety procedures should be developed for each intended application. Gloves should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions. |
|                        | Consult your supervisor or Standard Operating Procedure (S.O.P) for special handling<br>instructions.  |
| Body protection        | Use of protective clothing is good industrial practice. Cotton or polyester/cotton overalls will only provide protection against light superficial contamination that will not soak through to the skin. Overalls should be laundered on a regular basis. When the risk of skin exposure is high (e.g. when cleaning up spillages or if there is a risk of splashing) then chemical resistant aprons and/or impervious chemical suits and boots will be required. Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.  |
| Other skin protection  | Appropriate footwear and any additional skin protection measures should be selected<br>based on the task being performed and the risks involved and should be approved by a<br>specialist before handling this product.  |
| Respiratory protection | In case of insufficient ventilation, wear suitable respiratory equipment.<br>The correct choice of respiratory protection depends upon the chemicals being handled,<br>the conditions of work and use, and the condition of the respiratory equipment. Safety<br>procedures should be developed for each intended application. Respiratory protection<br>equipment should therefore be chosen in consultation with the supplier/manufacturer<br>and with a full assessment of the working conditions.  |

## Section 9. Physical and chemical properties

| -  |   |
|--|---|
| <u>Appearance</u>                            |   |

### Section 11. Toxicological information

| General               | USED ENGINE OILS<br>Combustion products resulting from the operation of internal combustion engines<br>contaminate engine oils during use. Used engine oil may contain hazardous<br>components which have the potential to cause skin cancer. Frequent or prolonged<br>contact with all types and makes of used engine oil must therefore be avoided and a<br>high standard of personal hygiene maintained. |
|-----------------------|---|
| Carcinogenicity       | No known significant effects or critical hazards.   |
| Mutagenicity          | No known significant effects or critical hazards.   |
| Teratogenicity        | No known significant effects or critical hazards.   |
| Developmental effects | No known significant effects or critical hazards.   |
| Fertility effects     | No known significant effects or critical hazards.   |

#### Numerical measures of toxicity

Acute toxicity estimates Not available.

### Section 12. Ecological information

#### **Toxicity**

No testing has been performed by the manufacturer.

#### Persistence and degradability

Expected to be biodegradable.

#### **Bioaccumulative potential**

This product is not expected to bioaccumulate through food chains in the environment.

| <u>Mobility in soil</u>                |  |
|--|--|
| Soil/water partition coefficient (Koc) | Not available.   |
| Mobility                               | Spillages may penetrate the soil causing ground water contamination.   |
| Other adverse effects                  | No known significant effects or critical hazards.  |
| Other ecological information           | Spills may form a film on water surfaces causing physical damage to organisms. Oxygen transfer could also be impaired. |

### Section 13. Disposal considerations

Disposal methods The generation of waste should be avoided or minimized wherever possible. Significant quantities of waste product residues should not be disposed of via the foul sewer but processed in a suitable effluent treatment plant. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.
